RE: PESIG project

Dear ISPN members, dear friends

Following a prior email by our president Rick Boop, we are striving to enhance the participation of colleagues in the Pediatric Epilepsy Surgery Interest Group (PESIG). This is part of a wider motion of the ISPN to enhance scientific collaboration between our members.

The roles of this interest group are:

1. To unite pediatric neurosurgeons from around the world, who treat children with epilepsy.
2. Share knowledge between members.
3. Collect ideas for study collaborations.
4. Initiate focused studies based on these ideas.

The PESIG will also collaborate with other international groups focusing on similar topics.

The PESIG will serve as a platform for performing various scientific/clinical projects, which often focus on relatively rare conditions.

All participants are eligible to participate, suggest, and lead projects.

As a first step – building the PESIG, we ask all members who treat children with epilepsy and are interested to join, to fill their personal data in the **Google form**. Please complete the form online:

<https://forms.gle/1ThXm4LrgGekyqgo9>

Join us to make a difference!

Sincerely,

Jonathan Roth, jonaroth@gmail.com, +972-524262095
